

The CVe Monitor Update for registered users who specify, buy, and use CVe products

## NEW CVe, NEW ADVANTAGES

The next generation of mould monitoring, **CVe v2**, is now available, bringing new features to customers that make tracking a mould's activity easier than ever.

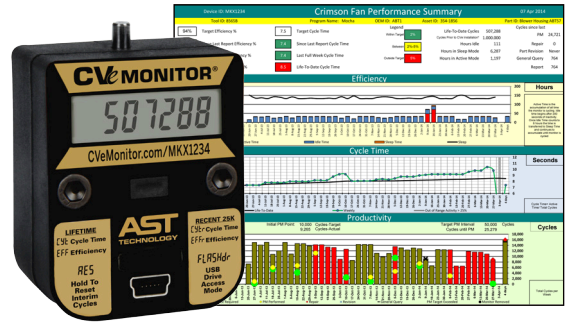

With CVe v2, users get unmatched tooling visibility. New features include:

- For retrofitting: Users can install on an existing mould and input previous cycle counts that appear on the display and in reports.
- PM Alerts: New alert modes notify users when PMs are due, including flashing on the display when maintenance is overdue.
- Removal Monitoring: When the CVe Monitor is removed from the tool for any reason (i.e. cleaning) pins on the back of the device will record it as an event.
- Three mounting options: Mount CVe at the parting line, below the parting line using an extension rod, or on the mould's surface using an external mounting block.
- Flash drive on CVe doubled from 2GB to 4GB for increased file storage.
- OnDemand software upgrade to enable use of new CVe functions in 10 languages.

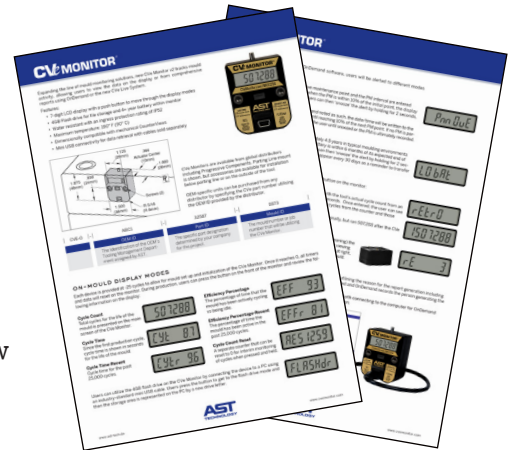

Please note that CVe v1 (silver face) is no longer available. In addition, the price for the monitor device has been adjusted up, from \$165 to \$185, with quantity discounts available as follows:

**Qty 10-49 get 5% off | 50 or more, 7% off**

Ordering the CVe "O" version has been simplified as well and the updated process will be sent to you in the coming weeks. In the meantime, please click **HERE** to view or download the new catalog pages.

The new CVe Monitor v2 gives mould builders, moulders and OEMs unprecedented access to a mould's activity, including PM alerts, removal monitoring, exceptions to targets and more.

## KNOWLEDGE IS POWERFUL

...And the new **CVe Live** gives moulders and OEM customers access to all the data they need to ensure a moulding program is meeting intended targets for maximum profitability.

CVe Live is a web-based hardware/cloud platform that provides OEMs and moulders with secure access to current mould activity reports from the CVe Monitor via Press Modules and Gateway hardware. Features Include:

- A dashboard that gives information at a glance and allows one to drill into specifics on each tool.
- Administration and security levels are controlled by the user, and access can be given to subcontractors to upload information or to initialize the CVe Monitors to begin submitting data.
- Radio Frequency (RF) antennas are interference-free in typical moulding environments.
- Secure website for data collection, reporting, and file storage.

AST encourages distributors to begin contacting OEM and moulder customers to give them the news about the new CVe and CVe Live. Questions? Contact DeAnn at **orderdesk@ASTTech.com**.

The CVe Live hardware/cloud platform provides real-time monitoring of your tools no matter where in the world they are being run. Click **HERE** to download the CVe Live Features sheet, or visit [cvemonitor.com](http://cvemonitor.com) for additional information.
